The six Copilot features that change classroom work.

Desktop-first, tenant-bounded, takes 10 minutes to learn.

Microsoft Copilot is the AI that lives inside your school's Microsoft 365 tenant, and these six features are where it earns its keep in a teaching week. What protects you is the sign-in: with a work or school account, enterprise data protection (EDP) is on by default — the licensing tiers and the compliance boundary are set out in Part 1 and Part 3 of the full guide.

Six features, one tenant

1

Copilot Chat

General-purpose chat with tenant-bounded EDP. Ground in your own OneDrive/SharePoint files with the paid add-on.

2

Copilot in Word

Draft from a prompt, rewrite selections, summarise documents in seconds.

3

Copilot in Outlook

Summarise long threads, draft replies in tone, coach your writing before sending.

4

Copilot in Teams

Meeting recap with action items. Catch colleagues up in three minutes.

5

Copilot in PowerPoint

Generate slides from a Word doc or outline. Rewrite slide copy on the fly.

6

Copilot Pages

Multiplayer AI-native canvas. Collaborate with colleagues and students in a persistent artifact.

Try it: 5 practical tasks.

Ten minutes, five moves, one less thing on your plate tonight.

1 **Rewrite a parent email in three tones**
In Outlook, open Copilot in compose. Ask for Professional / Friendly / Concise variants. Pick the tone that fits.

2 **Summarise a 40-message parent thread**
Open the thread in Outlook; tap Summary. Read three bullets in 30 seconds instead of scrolling.

3 **Generate a Teams meeting recap**
End your department meeting, open Copilot in the Teams meeting pane, request a recap with action items. Share to the staff wiki.

4 **Turn a Word outline into slides**
Write the plan in Word. In PowerPoint, Copilot → Generate from Word. You get a 12-slide starter deck to polish.

5 **Draft a differentiation plan in Copilot Chat**
Ask Copilot Chat, signed into your work account, for three differentiation paths for a mixed-ability Year 8 maths lesson on fractions.

• WATCH OUT · SIGN-IN AND DATA BOUNDARY

Sign in with your work or school account every time. The account is what protects you — not the web address: Microsoft says a personal account reaches the same Copilot host, so the URL tells you nothing. Signed in with a personal Microsoft account, you are in a different product under different terms, not protected by your school's data agreement. De-identify student data before any prompt. Check your own country's rules on student age, consent and data protection before a wider rollout — they differ, and the product does not decide them.

Want depth? The 25-page Microsoft Copilot Guide ships alongside this quick start — Part 1 for the licensing tiers, Part 3 for the compliance boundary.
