1 The maths study

Read about the study. Then guess: up or down?

Nearly 1,000 high-school students in Turkey practised maths in four lessons, and after each practice they took an exam alone, without AI. Each class was in one of three groups. One group had no AI, only books and notes. One group had an AI chatbot that gave answers when asked. One group had an AI tutor that asked questions and gave hints, but never the answer. How did the two AI groups do, compared with the group without AI?

Group	Practice, with AI: up or down?	Exam, without AI: up or down?
AI that gives answers		
AI tutor that gives hints		

Our reason for the guess about the answer group

For step 7, testing a rule with AI: pick one prompt. 1: I'm revising [topic] for a test. Ask me one question at a time. If I get it wrong, give me a hint, not the answer. 2: Here is my answer to [question]: [my answer]. Don't correct it. Ask me two questions that help me find the mistake myself.

Cut or tear along the dashed lines.

Name one thing AI could make you worse at. Does it matter to you, and if it does, when will you practise it?
