Why teenagers can't get up in the morning. Teenagers are not lazy: their bodies work differently. [1] Teenagers aged 13 to 17 need 8 to 10 hours of sleep a night. [2] In puberty, the body clock shifts, so teenagers get sleepy later at night and need to sleep later in the morning. [3] Many don't get enough: about one in three US high-school students sleeps less than 8 hours on school nights. [4] A 2023 study by the Nordic Teen Sleep Council found that one extra hour of sleep raises school grades by 20 percent. [5] That is why the American Academy of Pediatrics recommends that middle and high schools start no earlier than 8:30 in the morning. [6] Great minds have always known this: Albert Einstein slept ten hours every night. In short, sleep is not wasted time. It is how your brain gets ready for the next day.
